Subject Index

Compiled by Laurence Errington

10 Hz (alpha) rhythm 44–46
40 Hz rhythm 42, 47, 48, 184 (BR)

A
Access and phenomenal consciousness 450 (L)
Accessory basal nucleus of amygdala 518, 519, 520
Accessory radula-closer neuromuscular system of *Aplysia* 541–542
Acetylcholine (ACh)
  historical studies 388
  release
    detector patches 194–195, 196, 197
    hippocampal, presynaptic nicotinic autoreceptors regulating 94
Acetylcholine receptor 20–21, 318 (BR)
  deficiency 17–18
  nicotinic, *see* Nicotinic ACh receptor
  structure and function 20–21
Acetylcholinesterase
  deficiency 15–17
  Na^+ channels and, structural similarities 146
  in transgenic *Xenopus* 428–429
achaete (*ac*) 424
Acoustic motion detection 583–588
ACTH *see* Adrenocorticotrophic hormone
Action potential initiation and backpropagation in CNS 125–131
Activating transcription factor-2 229–230
Activity, brain, *see* Brain
Acute-phase reaction 565–570
Adaptive behaviour 553–557
Adenosine
  presynaptic inhibition of α-latrotoxin-induced miniature excitatory postsynaptic currents by 210
  receptor, dopamine receptor interactions with, in basal ganglia 482–487
ADH (vasopressin) gene, reversion of mutation 501–507
Adhesion molecules and synapses 322–323
ADP ribosylation 495 (BR)
Adrenocorticotrophic hormone (ACTH) and stress response 81
Afferent neurones
  otic (and neurotrophins) 159–164
    neurotrophin/neurotrophin receptor deficits leading to loss 163
    outgrowth 160
  visceral, bodily homeostasis and 235–239, 508–509 (L)
After-effect, motion 584–585
Age of neuronal cultures and interactions with dorsal-root entry zone 306–307
Aging (brain during) 410–415, 501–507
  cholinergic deficits, immortalized cell lines in treatment of 534–535
  mutational reversion and 507
  protein kinase C activation 410–415
Agrin, knockout mutant 28
Albino retina 165–169
Albumin deficit in NAR rat 504
Allergic encephalomyelitis and neuritis, experimental 399–403, 427 (BR), 428 (BR)
Alpha rhythm (10 Hz) 44–47
Alpha-1A subunit of Ca^{2+} channels, mutations 190–192
Alzheimer's disease 67–77, 154–159, 373–375, 493–494 (BR), 558–559 (L)
  amyloid and, *see* Amyloid
  animal models 71, 279–280
  IGF-1 potential use 329–330
  mitochondrial DNA mutations and 373–375
  NF-κB and 256–257
  PKC and 414
  presenilin and, *see* Presenilin
Ames window illusion 352–353
Amino acids, excitatory 372 (BR)
  see also Excitotoxicity
cAMP, circadian melatonin synthesis and 489–492
  see also Inducible cAMP early repressor
cAMP-response binding protein (CREB) and circadian melatonin synthesis 489
cAMP-response modulator (CREM) and circadian melatonin synthesis 489–491
AMPA receptors 544 (BR)
  Ca^{2+}-permeable, neurological disorders and 464–470
  GYK153655 as selective antagonist of 9–12, 396–397 (L)
  hippocampal, in development 523–529
  synaptic crosstalk and 378–384
Amperometry 282–284, 285–286
Amphibians, key stimulus and releasing mechanisms 332–339
Amphipathic nature of cysteine string proteins 226
Amputation, phantom sensation 561, 562–564
Amygdala 517–523
  bodily homeostasis and 508 (L)
  circuitries/connections within (rat) organization 517–523
  stress and 79
β-Amyloid (and its fragments) 67–77, 154–159, 373, 374, 493 (BR)
  cascade hypothesis 157–158
  as cause of dementia 280, 493 (BR)
  deposits in transgenic mouse 279
  IGF-1 protecting against effects of 330
  ionic effects 67–77
  NF-κB and 256–257
  in transgenic mouse, elevation 279
Amyloid precursor protein (APP)
  gene transfer to mouse 279
  mutations, pathogenic effects 155–157
  structure/function/metabolism 154–155, 558–559 (L), 559 (L)
Amyotrophic lateral sclerosis, IGF-1 use 326–329
Anatomy, John Zachary Young and the discipline of 434 (O)
  see also Functional neuroanatomy
Anchoring proteins in PKC activation in aging rat brain 410–415
Antibodies, monoclonal, and astrocytic antigens 571, 573
Antidiuretic hormone (ADH) (vasopressin) gene, reversion of mutation 501–507
Antigen(s)
  astrocyte 570–573
  presentation, and IFN-β and multiple sclerosis 65–66
Antigen-specific T cells, experimental autoimmune encephalomyelitis and 400–401
Antipsychotics/neuroleptics
  dopamine neurone depolarization block as model of action 31–37, 393–395 (L)
  glutamatergic effects 393–395 (L)
  partial agonism by 393 (L), 394 (L)
Antisense gene knockdown, *see* Knockdown
Anuran amphibians, key stimulus and releasing mechanisms 332–339
AP-1 and c-Jun 230
Aplysia
  accessory radula-closer neuromuscular system 541–542
  siphon-withdrawal reflex 175
Apoptosis 143–144
  in development of brain
    bone morphogenetic protein and 312
    in pathological development 143–144
  p75 and 1–2, 287–290
  presenilin and 158
  T cell, *see* T cell
  trkA and 1–2, 287–290
Appetitive reward learning in honeybees 245–252
  see also Eating behaviour
Area V1, V2 etc., *see* V
Arm movements, *see* Hand/arm movements
Association, neocortex of, memory and the development of 453
Associative reward learning in honeybees 245–252
Astasia and Luigi Luciani's work on cerebellum 112–116
Asthenia and Luigi Luciani's work on cerebellum 112–116
astray (*ast*) 7
Astroblasts, reactive astrocytes as subpopulation of 574
Astrocytes/astroglia 570–577
  in brain maturation, bone morphogenetic protein and 313
  in hippocampal slice cultures 473
  reactive 570–577
    heterogeneity 573–575
    markers 570–573
    permissivity for axonal regrowth 575–557
Ataxias and Ca^{2+} channel mutations 190–191
ATF-2 229–230
Atlases, *see* Maps
Atonia and Luigi Luciani's work on cerebellum 112–116
Attention deficits, dyslexics 150
Auditory system, dyslexia and 147–152, 398 (L)

see also Acoustic motion detection; Hearing; Paced auditory serial addition test; Sound
Augmentation as component of short-term synaptic enhancement 170, 174
Autoimmune disease
neuromuscular 15, 16
T-cell apoptosis and 399–404
Automated detection of behavioural items 187–189
Autonomic nervous system 49–50 (BR), 235–239, 508–509 (L), 595–596 (BR)
bodily homeostasis and 235–239, 508–509 (L)
endocrine system and, interactions 595–596 (BR)
otic, outgrowth of neurones 160
Autoreceptors, presynaptic 391
nicotinic 94, 96
Awareness 183–185 (BR)
Axis-orientation selective neurones in caudal intraparietal sulcus 354
Axon/nerve fibre
action potential initiation by 125–131
CNS/PNS glial interfaces and interactions with 304
giant (squid), John Zachary Young and 434 (O)
growth and regeneration, *see* Growth; Regeneration
Alexander von Humboldt's experiments 240

B

B-50, *see* GAP-43
Bacteria, 'adaptive' mutations in 501–507
Balb/C strains, resistance to kainate-induced hippocampal cell death 499–500
Barrel, cortical, formation, 5-HT and 271
Basal ganglia 482–487
dopamine–adenosine receptor interactions 482–487
functional model 152–153 (L)
Basal nucleus of amygdala 518, 519, 520
accessory 518, 519, 520
bashful (*bal*) 6–7
Basket cell, John Eccles' studies 325 (O)
Bees, associative reward learning 245–252
Behaviour 187–189
adaptive 553–557
adenosine–dopamine receptor interactions at level of 485–486
amphibians, visual 332–339
cocaine *in utero* affecting later 271–272
experience-dependent, honeybees 245–252
H-reflex conditioning and effects on 593–594
ingestive, drug receptor subtypes and 545 (BR)
insect 139–140 (BR)
learning changing 588–594
belladonna (*bel*) 6
2,3-Benzodiazepine as AMPA-receptor selective antagonist 9–12, 396–397 (L)
β-amyloid protein, *see* Amyloid
Bicuculline-insensitive insect GABA receptors 582
Binocular stereopsis and parietal association cortex 350–357
Blindsight 22–23 (L)
Blood–brain barrier and multiple sclerosis 427 (BR)
Body
brain's awareness of 560–564
brain's interaction with 553–557
Bone morphogenetic proteins 309–317
neurulation and 309–310, 515–516
Botulinum toxin, hippocampal slice-culture studies 475–476
Boundary formation, visual perception and 107–110
Bovine spongiform encephalopathy 546 (BR)
boxer (*box*) 7
Brain
activity 436–438
cortical plasticity related to 198–202
hippocampal synaptic plasticity related to 526, 527
optical imaging and 436–438
pathological 441
physiological processes associated with 436
retrieval-related 215–216, 217
visual cortex map development and 375
body and, *see* Body
development, *see* Development
environment and, *see* Environment
event-related potentials, intelligence and 366–368
functional imaging, *see* Functional neuroanatomy (and functional neuroimaging)
IGF-1 actions 327
injury/trauma, *see* Injury
insect, *see* Insect
maps/atlases, *see* Maps
motor imagery and effect of lesions in 55
multilineage potential neural stem cells in mammals 203–204 (L)
NF-κB as signal in 254
nuclei, delineation 58–62, 343–346 (L)
protein kinase C activation in aging 410–415
repair, *see* Repair
size, intelligence and 368–369
see also Mind–brain
Brain-derived neurotrophic factor 1–2
activity-dependent cortical plasticity and 198–202
gene transfer (and possible therapeutic potential) 536
inner ear
absence, effects 161–162, 163
expression in sensory epithelia 161
Brainstem
bodily homeostasis and 235–239
stress response and 79
Brattleboro rat 501–507
Breast amputees, phantom sensation 562
Brodmann's areas 232 (BR), 454
memory and 454
episodic 214
see also specific areas
α-Bungarotoxin-sensitive presynaptic nACh receptors 95
Bursts 38–43, 244 (L)
coincident 42
synaptic transmission 38–43

C

C-nociceptors and neurogenic inflammation 183
C57BL/6 mouse, resistance to kainate-induced cell death 499–500
CA1 pyramidal cells
Ca^{2+}-permeable AMPA receptors in, global ischaemia and 466–467
NMDA-receptor – dependent synaptic plasticity in, spatial memory and 102–106
slice cultures 473
CA3–CA1 synapses
Ca^{2+} channels and presynaptic inhibition of neurotransmitter release 204–212
plasticity, in hippocampal slice cultures 474
CA3 pyramidal cells
$[Ca^{2+}]_i$ oscillations 527, 528
slice cultures 473
Cadherins and synapses 322–323
Caenorhabditis elegans
genetic analysis of axon guidance 4
presenilin isologues 155
Cajal–Retzius cells and termination of entorhinal fibres 221
Calcium antagonists, cerebral ischaemia 498
Calcium ion(s) 170–177, 404–409, 464–470
AMPA receptors permeable to, neurological disorders and 464–470
nerve growth and 141 (BR)
neurotransmitter release and 391, 404–409
oscillations, intracellular 526–528
in presynaptic terminal, short-term synaptic enhancement and 170–177
Calcium-calmodulin kinase type II 545 (BR)
postsynaptic density at glutamatergic synapses and 265, 266, 267
Calcium ion channels 189–192, 204–212, 404–409
β-amyloid protein (and its fragments) and 68, 69, 70
in excitable cells, facilitation of currents through 449–451 (L)
mutations, pathologies associated with 189–192
presynaptic, transmitter release and 204–212, 404–409
structure 189–190
voltage-gated 16, 204–212
Calmodulin and GAP-43 88–89
see also Calcium-calmodulin kinase type II
Canaries, vocal control nucleus 58–62
Cancer, germ-line mutations and 506
Capacitance, membrane, electrophysiological methods of monitoring 281–282, 285
Capsaicin 183 (BR)
Carbon monoxide 391
redox state, near-infrared measurements 439, 440
Cardioactive peptides of *Aplysia*, small 541–542
Cardiovascular control 508 (L), 509 (L)
Catenins and synapses 322, 323
Caudal intraparietal sulcus, axis- and surface-orientation selective neurones in 354–355
Caudal pons, respiratory rhythm and 121, 123–124
Caudal striatum, pretectal control involving 336
CCG repeat diseases 349 (L)
Cell adhesion molecules and synapses 322–323
Cellular neurobiology 319 (BR)
Central nervous system

action potential initiation and backpropagation in 125–131
inflammation and
acute-phase reaction and 565–570
T-cell dependent 399–404
Central nucleus of amygdala 519, 520, 521
Central rhythm generator, respiration and 119–124
Cephalopods, John Zachary Young's studies 434 (O)
Cerebellum
John Eccles' studies 325 (O)
eyeblink conditioning and 177–181
Luigi Luciani's studies 112–116
presynaptic Ca^{2+} channel inhibition and transmitter release at synapses in 207, 208
Cerebrovascular accident, *see* Stroke
Cerebrum
asymmetries in schizophrenia 340–342
blood flow (during brain activity) 437
motor imagery and 55, 56
in pathological states 441
cortex, *see* Cortical areas
ischaemia, *see* Ischaemia
Cervical ganglion, superior, neurotrophic factors and 1–2
CGS 21680 485
Chapsyn-110 266, 267
Chick, neurulation 510–517
Cholecystokinins and ingestive behaviour 545 (BR)
Cholinergic deficits in aging brain, immortalized cell lines in treatment of 534–535
Chromaffin cells
Ca^{2+} current facilitation 448–450 (L)
secretion (of catecholamines) by, analysis 283–284
Ciliary ganglion, presynaptic Ca^{2+} channel inhibition and transmitter release at synapses in 207, 208
Cingulate cortex, anterior, cocaine effects on development of 271–272, 273
Circadian clocks/timing 459–464
melatonin synthesis and 487–492
transcription and 461–462, 487–492
Circuits, synaptic 390–391
Circumventricular organs, cytokines and 566–567
clock 461
Clock, circadian, *see* Circadian clocks
Clostridial toxins, hippocampal slice culture studies 475–476
Clusterin 575
CNQX 526
CO, *see* Carbon monoxide
Cocaine, brain development and *in utero* effects of 270–272
Cochlear ganglion neurones, loss and protection from loss 100–102, 159–164
Co-cultured synapses, sympathetic, presynaptic Ca^{2+} channel inhibition and transmitter release 207, 208
Cognition 232–233 (BR)
visual 317–318 (BR)
Cognition enhancers and protein kinase C 413–414
Collagen and peripheral neurogenesis 25, 26
Colliculus, inferior, motion detection and 585, 586
Colony stimulating factors in neural development 357–365
Colour vision 233–234 (BR)
Commissural fibres, sprouting 218–223
commissureless 4, 262
Comparative vertebrate neuroanatomy: evolution and adaptation 51–52 (BR)
Computational neuroethology 556
Computational neuroscience 53–54, 274–275 (BR)
Computational vision 318 (BR)
Conceptual memory 455
Conditioning 588–594
eyeblink 177–181
H-reflex, learning and 588–594
Conduction velocity, intelligence and 368
Connectional delineation of brain area 58–62, 343–346 (L)
Consciousness 183–185 (BR)
neural correlates of 450 (L)
Context-sensitive boundary formation, visual perception and 107–108, 110
Corporeal awareness 560–564
Cortical areas/cortex, cerebral (pallium)
consciousness and 183–185 (BR)
development
of maps, *see* Maps
Mediterranean Neuroscience Conference 551
neurotransmitter influences on 269–274, 358–359
excitatory amino acids and 372 (BR)
maps, *see* Maps
motor imagery and 54–57
movements of hand/arm and eye and 350–357, 371 (BR)
oscillations 42, 44–49
plasticity, *see* Plasticity
somatosensory, corporal awareness and 564
ventromedial, in pretectal control 336
visual perception and 106–111, 371
see also specific areas
Corticogeniculate feedback and visual perception 106–111
Corticospinal tract and conditioning 592
Corticosteroids and stress response 78, 81
Corticotrophin-releasing hormone and stress response 78, 79, 80, 81
Co-transmitters, analysis of complexity 542–543
Cre–loxP in gene targeting 102–103
Creutzfeldt–Jakob disease 546 (BR)
Cues
axonal guidance, fetal neural transplantation and 477–482
sensory, memory and 456
Cultures (nerve cell/neurones in)
age, influence on their interactions with dorsal root entry zone 306–307
of immortalized stem and progenitor cells 530–538
slice 471–477
see also Co-cultured synapses
Cyclo-oxygenase type 2
febrile response and 567, 568
NF-κB and gene for 255
Cysteine string proteins, DnaJ-like 223–227
Cytoarchitectural delineation of brain area 58–62, 343–346 (L)
Cytochemical delineation of brain area 58–62, 343–346 (L)
Cytokines 357–365, 565–570
as astrocytic markers 571
febrile response and 565–570
gp130 neuropoietic, bone morphogenetic proteins and 313
in neural development, *see* Development
and reactive astrocytes
and permissivity for axonal regrowth 575
and reactive gliosis 574
see also specific cytokines
Cytoplasmic antigens
as astrocyte markers 570–573
and reactive gliosis 574
Cytotoxicity/cellular toxicity
β-amyloid-induced 70–71
microglial function 65–66

D

dachshund 419
dackel (*dak*) 7
Danio rerio, genetic analysis of axon guidance and mapping 3–8
Darwinian nature of neural development 291–293 (L)
Deafferentation, partial, laminar cues influencing fibre systems after 218–223
Death (cell)
neuronal
in Alzheimer's disease 493
c-Jun and 227–231
excitotoxic, *see* Excitotoxicity
programmed, *see* Apoptosis
Decapentaplegic gene product (Dpp) 309, 310–311
Decision-making and superior parietal cortex 57
Declarative memory 454
Dementia, causes 280, 493–494 (BR)
Dendrites, action potential initiation by 125–131
Dendritic spines in pyramidal cells in chronic epilepsy 474–475
Densin-180 and postsynaptic density at glutamatergic synapses 267–268
Dephosphorylation, GAP-43 87
Depolarization
dopamine neurone, blocking as model of antipsychotic drug actions 31–37, 393–395 (L)
presynaptic membrane, neurotransmitter release and 225
Depolarizing potentials, giant (GDPs) 524, 526–528
Depressions (at synapses) 431–433
long-term, *see* Long-term depression
minimal model 432
spreading 441
cortical lesions inducing 348 (L)
Depth perception and parietal association cortex 350–357
Deutocerebrum (of insects) 259
Development and maturation (neural – predominantly CNS) 84–91, 119–124, 165–169, 258–264, 269–274, 291–293 (L), 303–317, 421–427, 428–429 (BR), 477–482, 510–517, 523–529
brain nucleus defined early in 62
cortical, *see* Cortical areas
cytokines in 357–365
bone morphogenetic proteins 309–317
darwinian nature of 291–293 (L)
dorsal root entry zone 303–308, 429 (addendum)

entorhinal fibres in, segregation from hippocampal fibres 219
eye, *see* Eye
general mechanisms 263
glial cells in, *see* Glia
hindbrain, respiratory rhythms and 119–124
hippocampal 219
GABA$_A$/AMPA/NMDA receptors and 523–529
insects
brain 258–264
somatogastric nervous system 421–427
neocortex of association, memory and 453
neural fold/tube/plate, *see* Neural tube; Neurulation
neuronal 143–144, 259–260
GAP-43 and 84–91
NF-κB as signal in 256
neurotransmitter influences on 269–274, 358–359
pathological 143–144
protein kinase C in 410–415
reconstructive capacity of brain and mechanisms *seen* in 477–482
retinal, albino retina and 165–169
spinal stretch reflex conditioning during 589, 590
transgenic *Xenopus* in studies of 428–429 (BR)
di/di 501–507
Diabetic neuropathy, IGF-1 use 329
dieldrin, Resistance to (*Rdl*) 578–583
Differentiation, neuronal
bone morphogenetic proteins and 313–314
cytokines involved 358–361, 361–362
GABA-containing neurones, neurotrophins and 199–200
DNA
repair
SOS-'error-prone' 505
transcription-coupled 506
transcription, *see* Transcription; Transcription factor
DnaJ-like cysteine string proteins 223–227
DOPA 536
retinal neurogenesis and 169
DOPA-decarboxylating enzyme, gene transfer (and possible therapeutic potential) 536
Dopamine-containing terminals, striatal, presynaptic nACh receptors on 93
Dopamine neurones (striatal/nigrostriatal, etc.)
cocaine effects on development of areas innervated by 271–272, 272–273
depolarization block as model of antipsychotic drug actions 31–37, 393–395 (L)
foetal transplantation studies 478–479, 481
6-OHDA-induced degeneration of, GDNF gene delivery rescuing neurones from 277–278
Dopamine receptor–adenosine receptor interactions in basal ganglia 482–487
Dorsal root entry zone maturation 303–308, 429 (addendum)
Dorsoventral patterning 310–312
Down syndrome and apoptosis 144
Dpp (decapentaplegic gene product) 309, 310–311
dreadlocks 4
Drosophila melanogaster
bone morphogenetic proteins 309, 310–311, 315
brain development 258–264
DnaJ-like cysteine string proteins 223–227
ether-à-go-go (*eag*) K$^+$ channel 13–14
eye development 415–421
GABA receptors 578–580
genes, *see specific genes*
genetic analysis of axon guidance 4
olfactory learning 247–248
somatogastric nervous system development 422–426
Drug receptor subtypes and ingestive behaviour 545 (BR)
see also Pharmacology *and specific drugs*
du Bois Reymond, Emil 241–242
Duchenne muscular dystrophy 504
Dyslexia 147–152, 397–398 (L)
Dysmetria and Luigi Luciani's work on cerebellum 112–116

E

eag, *see ether-à-go-go*
Ear, inner, neurotrophins in 100–102, 159–164
protective role 100–102
receptors for 160
distribution pattern 161
Eating behaviour and drug receptor subtypes 545 (BR)
see also Appetitive reward learning
Eccles, John C 324–325 (O)
Ecological psychology 556
Ectoderm, epidermal, in neurulation 513–514
Efferent neurones
otic (and neurotrophins) 159–164
neurotrophin/neurotrophin receptor deficits leading to reorganization 163
outgrowth 160
visceral, bodily homeostasis and 235–239
Ego-centric distance and parietal association cortex 350–357
Electrical stimulation, functional, in spinal injury 75–76
Electricity, animal (historical studies)
Luigi Galvani's 443–448
Alexander von Humboldt's 239–242
Electrochemical studies for detecting released secretory contents 282–284, 285–286
Electromyography, spinal cord injury 347 (L)
Electrophysiological studies
Luigi Galvani's 443–448
membrane capacitance 281–282, 285
NO role 301
Embryology, *see* Development
empty spiracles (*ems*) 262
ems 262
Emx 262
Encephalomyelitis, experimental autoimmune/allergic 399–403, 427 (BR), 428 (BR)
Encephalopathies, transmissible spongiform 546 (BR)
Encoding 213–218, 557–558 (L)
Endocrine–autonomic nervous system interactions 595–596 (BR)
Endocytosis, techniques for measuring 281–287
Endothelial cells and IFN-β and multiple sclerosis 64
Endothelial NO synthase 132–134
deficiency mutant studies 136
Endotoxin (lipopolysaccharide) and the CNS 565, 567, 568
Endstopping effect, visual perception and 108–109
Energy status, intracellular, brain activity and 437
engrailed 260
Entorhinal cortex lesions, sprouting in hippocampus after 218–223
Entrainment, circadian timing and 461–462
Environment, brain and
developmental aspects 143
interactions between 553–557
Enzymes
as astrocytic markers 571
ion channels as 144–147
Ephapses 391
Epidermal ectoderm in neurulation 513–514
Epilepsy
chronic, dendritic spines in pyramidal cells in 474–475
continuous, Ca^{2+}-permeable AMPA receptors and 468–469
Episodic ataxia type-2 and Ca^{2+} channel mutations 190, 191
Episodic memory, functional neuroanatomy 213–218, 557–558 (L)
Epithelium/epithelial cells
in neurulation 511–513
pigmented (retina), albinism and 167, 169
sensory, of inner ear, neurotrophic factors expressed 161
Error-correcting learning rules 246
ether-à-go-go (*eag*) (K$^+$ channel of *D. melanogaster*) 13–14
rat homologue (r-*eag*) 243–244 (L)
Ethical issues, gene transfer 533
European–Latin American collaboration 549–551
European Neuroscience societies, initiative taken by 116–118
Event-related potentials, brain, intelligence and 366–368
Evolution
language, schizophrenia and 342
nervous system in vertebrates 51–52 (BR)
visual system 416
Excitable cells, facilitation of Ca^{2+} currents in 448–450 (L)
Excitatory amino acids 372 (BR)
see also Excitotoxicity
Excitatory junction potentials, cysteine string proteins and 225, 226
Excitatory postsynaptic currents, α-latrotoxin-induced miniature, presynaptic inhibition by adenosine 210
Excitatory postsynaptic potentials (EPSPs)
field, presynaptic Ca^{2+} transients in hippocampal synapses and 206, 209
historical studies 324 (O), 325 (O)
Excitotoxicity (and excitotoxic cell death)
Ca^{2+}-permeable AMPA receptors and 464–470
hippocampal, kainate-induced, mice

resistant to 499–500
Exocytosis
neurotransmitter release via DnaJ-like cysteine string proteins and 223–227
at neuromuscular junction, location of exocytotic pits 406
techniques for measuring 281–287
Experience-dependent behaviour, honeybees 245–252
Extracellular matrix in neural crest cell migration 23–31
Extrapyramidal side-effects of antipsychotics 395 (L)
Eye 233 (BR)
blinks 22 (L)
conditioning 177–181
clocks 460
development 415–421
retina, albinism and 165–169
movements (generally), dyslexia and 149–150, 398 (L)
scans 22 (L)
vergences 22 (L)
eyes absent 419

F

F1, *see* GAP-43
FACADE theory 110
Facilitation
of Ca^{2+} currents in excitable cells 448–449 (L)
presynaptic
bursts causing 39, 40
as components of short-term synaptic enhancement 170, 171, 173–174
Fas and T cell apoptosis 402
Fascia dentata and sprouting in hippocampus 218–223
Fast-decaying facilitation (F1) as component of short-term synaptic enhancement 170, 171, 173–174
Fate mapping 515
Febrile response 565–570
Feedback
from body and environment, adaptive behaviour and 555
corticogeniculate, visual perception and 106–111
Fetus, *see* Foetus
Fever and the CNS 565–570
Field excitatory postsynaptic potential and presynaptic Ca^{2+} transients in hippocampal synapses 206, 209
Fluorescence monitoring of endocytosis and exocytosis 284, 285–286
Fly, genetic analysis of axon guidance 4
FM1-43 284, 285
FMRI protein 349 (L)
Foetus
cocaine effects on brain development and later behaviour 270–272
neural transplants from 477–482
Food, *see* Appetitive reward learning; Eating behaviour
Forebrain
ischaemia, Ca^{2+}-permeable AMPA receptors and 467
monoamines and development of 269–274
multilineage potential neural stem cells in 203–204 (L)
stress response and 79, 82
40 Hz (gamma) oscillations 42, 47, 48, 184 (BR)

c-Fos
adenosine receptor–dopamine receptor interactions in basal ganglia and 484–485
circadian timing and 461
CNS response to systemic inflammation and 567
Fos-related antigen, circadian melatonin synthesis and 490
Fra-2 and circadian melatonin synthesis 490
Fragile X syndrome 349 (L)
Free radicals and Alzheimer's disease 374
Functional electrical stimulation in spinal injury 75–76
Functional neuroanatomy (and functional neuroimaging) 213–218, 232 (BR), 435–442, 494 (BR), 557–558 (L)
AMPA receptor-mediated Ca^{2+} influx in CA1 pyramidal cells 468
fever and 569
intelligence and 369
mapping and 496 (BR)
memory and 457
episodic 213–218, 557–558 (L)
Funding of neuroscience, European 117–118

G

G proteins
Ca^{2+} currents inhibited by 448 (L)
GAP-43 and 87
GABA
in development 523–528
intersynaptic diffusion 378, 380
GABA and glycine-like receptor of Drosophila (*Grd*) 578, 579–580
GABA-containing neurones
cocaine effects on development of 271
cortical, activity-dependent plasticity 198–202
stress and 82, 83
striatal, adenosine and dopamine receptors and 482–487
GABA receptors 523–529, 578–583
$GABA_A$ receptors, hippocampal, in development 523–529
insect 578–583
GABA transporter 371 (BR)
GABAergic neurones
Galeazzi, Lucia 447
Galectin and T-cell apoptosis 402
Galvani, Luigi 443–448
Gamma (40 Hz) rhythm/oscillations 42, 47, 48, 184 (BR)
Ganglion, superior cervical, neurotrophic factors and 1–2
Ganglion cells
inner ear, *see* Cochlear ganglion neurones; Vestibular neurones
retinal 333, 337
visual information parcelled by 332
GAP-43 (B-50; F1; neuromodulin)
c-Jun and 230
neuronal development and plasticity and 84–91
Gaseous messengers 381
Gastrointestinal tract and satiation 545 (BR)
Gastrulation, regulation of neurulation during 309–310
GDNF family (and its receptors) 277–279

Gene(s)
mutations, *see* Mutations
in eye development 418
immediate-early, *see* Immediate-early genes
marker and reporter, in gene transfer 533–534
neuroprotective, to kainate in mice 499–500
in neurulation, expression 515–516
see also Knockdown; Knockout *and specific genes and gene products*
Gene transfer, immortalized neural stem and progenitor cells for 530–538
Genetics
Alzheimer's disease 373–375
axon guidance, *see* Growth
of insect brain development 262–263
multiple sclerosis 428
neuromuscular junction disorders 15–22
Geniculate nucleus, lateral
albinism and 165
magnocellular laminae of, dyslexia and 147–152
visual perception and 106–111
Germ-line mutations 504, 506
Giant axon (squid), John Zachary Young and 434 (O)
Giant depolarizing potentials (GDPs) 524, 526–528
Glia/glial cell(s)
in development
bone morphogenetic proteins and 313
of insect brain 258–264
precursors, of PNS and CNS, interfaces between 303–308, 429 (addendum)
function 391
NF-κB involvement 252–258
GAP-43 in 87

Resistance to dieldrin (*Rdl*) 578–583
Respiratory rhythms in vertebrate, development 119–124
Reticular formation and bodily homeostasis 235–239, 508–509 (L)
Reticular theory of nervous system 385
Retina
  albino 165–169
  circadian oscillations 460
  visual information leaving 332–333, 335
Retinotectal system 332–333
  zebrafish mutants, axonal guidance studies 3–8
Retrieval, memory 458
  brain activity with 215–216, 217
  episodic, functional neuroanatomy 213–218, 557–558 (L)
Reward learning in honeybees 245–252
Rhombomeric organization in embryonic hindbrain, respiratory rhythms and 119–124
Rhythmic motor behaviour linked to respiratory function, development 119–124
Rhythmic oscillations, *see* Oscillations
Robotics, behaviour-based 556
Roller tube cultures 472

S

S-100β
  as astrocytic marker 570–573
  and reactive gliosis 574
SAP-97 266
SAP-102 266, 267
SAPKs (JNKs) 229, 230
Satiation and satiety and drug receptor subtypes 545 (BR)
Schema, body, extended 561–562
Schizophrenia
  antipsychotics in, *see* Antipsychotics
  hemispheric dominance of language in aetiology of, failure of 339–343
scute (*sc*) 424
Secretions from living cells
  monitoring 281–287
  neurotransmitter release and proteins involved in 405, 407–409
Segmentation in embryonic hindbrain, respiratory rhythms and 119–124
Semantics 233 (BR)
Sensation, phantom, amputees 561, 562–564
Sensorimotor codes of releasing systems 336–338
Sensorimotor hand 276 (BR)
Sensorimotor stimulation improving locomotor recovery after spinal cord injury 72–77, 346–347 (L)
Sensory cortical maps, corporeal awareness and 564
Sensory cues, memory and 456
Sensory memory 454, 455
Sensory receptors for harmful events/noxious stimuli (nociceptors) 182–183 (BR), 276 (BR)
Sequential nature of behaviour 188
Serotonin (5-HT) and stress 80
shaker (and SHAKER protein) 100
Sherrington, Charles Scott 386–387
Short-term memory 456, 457, 458
Short-term synaptic enhancement 170–177
Signal transduction
  bone morphogenetic proteins and 314–315
  cytokines involved in 358
  NF-κB and 252–254
  PKC-mediated, anchoring proteins and 410–415
sine oculis 419
single-minded 262
Siphon-withdrawal reflex of *Aplysia californica* 175
Six3 419, 420
sleepy (*sly*) 6
Slice cultures, organotypic 471–477
Slow channel syndrome 18–20
  animal model 19–20
Slow-decaying facilitation (F1) as component of short-term synaptic enhancement 170, 171, 173–174
Sly disease, immortalized cell-line transplants 537
SMADs 315
SNAP-25 405
SNAREs 405
  slice culture studies 475–476
'Sniffer-patch' technique for detection of neurotransmitter release 192–197
Social interactions, monitoring 188
Sodium ion(s), short-term synaptic enhancement and 172–173
Sodium ion channels
  as enzymes 145–146
  voltage-gated 16
Sog 310, 311
Somatic hypermutation in Ig genes 506
Somatogastric nervous system development in insects 421–427
Somatosensory cortex and corporeal awareness 564
Songbirds, vocal control nucleus of 58–62, 343–346 (L)
Sonic Hedgehog 310, 419
SOS-'error-prone' DNA repair 505
Sound, perceptual organization 185 (SR)
  see also Acoustic motion detection; Auditory system; Hearing; Paced auditory serial addition test
Space, language and 232–233 (BR)
Space maps, auditory 586
Spasticity after spinal injury 76, 346–347 (L)
Spatial concepts in language 232–233 (BR)
Spatial learning and NO 301
Spatial memory, NMDA receptor dependent synaptic plasticity in CA1–pyramidal cells and 102–106
Spatiotemporal model of short-term synaptic enhancement 173–174
Spectroscopy, non-invasive optical 435–442

Spikes 496 (BR)
single, synaptic transmission and 38–39
Spinal cord 72–77
John Eccles' studies 324–325 (O)
IGF-1 actions 327
injury, sensorimotor stimulation improving locomotor recovery after 72–77, 346–347 (L)
plasticity, *see* Plasticity
Spinal nerves, dorsal root, entry zone, maturation 303–308, 429 (addendum)
Spinal reflexes
historical studies 386, 390–391
stretch (and its electrical analogue – H-reflex) 588–594
Spinocerebellar ataxia type-6 and Ca^{2+} channel mutations 190, 191
Spongiform encephalopathies, transmissible 546 (BR)
Squid giant axon, John Zachary Young and 434 (O)
Status epilepticus and Ca^{2+}-permeable AMPA receptors 468–469
Stem cells, neural
immortalized cultures for CNS gene transfer and repair 530–538
in mammalian forebrain, multilineage potential 203–204 (L)
Stereopsis, binocular, and parietal association cortex 350–357
Steroids and stress response 78, 81
Stimuli, key, neural correlates 332–339
Stress, neurocircuitry 78–84
Stress activated protein kinases (JNKs; SAPKs) 229, 230
Stretch reflex, spinal (and its electrical analogue – H-reflex) 588–594
Stria terminalis, bed nucleus of, stress and 79, 80
Striate cortex (V1) visual perception 106–111
Striatonigral system, *see* Dopamine neurones; Substantia nigra
Striatum
caudal, pretectal control involving 336
dopamine terminals and dopamine neurones, *see* Dopamine-containing terminals; Dopamine neurones
GABA-containing neurones, adenosine and dopamine receptors and 482–487
6-OHDA-induced degeneration in, GDNF gene delivery rescuing neurones from 277–278
Stroke/cerebrovascular accident, treatment 498 (BR)
IGF-1 330–331
NGF 535–536
NO synthase inhibitors 137–138
Subependymal layer, multilineage potential neural stem cells in 203–204 (L)
Substantia nigra
dopamine neurones in depolarization block and 394 (L), 395 (L)
GDNF gene delivery 278
Subthalamic nucleus 152–153 (L)
Sulci 232 (BR)
caudal intraparietal, axis- and surface-orientation selective neurones in 354–355
Summed field potentials 391
Suprachiasmatic nuclei of hypothalamus, circadian timing and 459–464, 488
Surface-orientation selective neurones in caudal intraparietal sulcus 354–355
Surgery, cerebral ischaemia 498
Survival, neuronal, c-Jun and 227–231
SV40 antigens for immortalizing neural stem/progenitor cells 530, 531
Sympathetic co-cultured synapses, presynaptic Ca^{2+} channel inhibition and transmitter release 207, 208
Synapses 38–43, 84–91, 170–177, 204–212, 291–293 (L), 298–303, 377–392, 431–433
cadherins and 322–323
central, bursts vs single spikes 38–43
crosstalk 377–384, 509 (corrigendum)
depression, *see* Depression
in development 291–293 (L)
GAP-43 and 84–91
hippocampal
Ca^{2+} channels and presynaptic inhibition of neurotransmitter release at 204–212
slice cultures 474
historical perspectives 385–392
memory and 451–452
spatial 102–106
plasticity/remodelling 38–43, 89–91, 170–177, 544 (BR)
in bees 251
CA3–CA1 474
eyeblink conditioning and 177–181
in neonatal hippocampus, activity-dependent 526, 527
NMDA receptor dependent, in CA1–pyramidal cells 102–106
NO and 298–303
potentiation at, *see* Potentiation
short-term enhancement 170–177
Taxco conference on integration of responses 550
transmission across, *see* Neurotransmission
see also Nerve *and entries under* Postsynaptic; Presynaptic
Synaptic vesicles (secretory vesicles) 405
DnaJ-like cysteine string proteins 223–227
historical studies 389
techniques for measuring cycling of 281–287
Synaptobrevin 405
Synaptosomal receptors for cytosolic fusion proteins, *see* SNAREs
Synaptotagmin 405
Syntaxin 405, 408, 409

T
T-antigen, large (SV40), for immortalizing neural stem/progenitor cells 530, 531
T cells
apoptosis (and autoimmune disease) 399–404
therapeutic induction 402–403
IFN-β and multiple sclerosis and 64, 65–66
Tancytes 574–575
Tau 493 (BR)
Tay–Sachs disease, immortalized cell line transplants 537
Tectum, optic 332–333
axonal growth from retina to, in zebrafish 3–8
responses, pretectal sharpening 335–336
Tegmental area, ventral, antipsychotic drug inactivation of dopamine neurones in 33, 34, 35–36, 394 (L), 395 (L)
Telencephalic control of pretectum 336
Temporal delay in motion detector schemes 584, 586
Temporal encoding, synaptic depression and 432
Temporal information processing
dyslexia and 147–152
short-term synaptic enhancement and 174–176
Temporal lobe/regions
amygdala, *see* Amygdala
episodic memory and 213–214, 215–216, 558 (L)
10 Hz rhythm 44–47
Tenascin
and peripheral neurogenesis 26
and reactive astrocytes 575
Tendon jerk (spinal stretch reflex) and its electrical analogue (H-reflex) 588–594
Tetanic presynaptic activation, increase in synaptic efficacy decaying after 170–177
Tetrodotoxin insensitivity of presynaptic nACh receptors 92–93
TEXANS 372 (BR)
TGF superfamily, bone morphogenetic proteins as members if 309
Thalamus
development 551
pretectal neurones, response properties 333
Theta oscillations 40, 41, 551
Three-dimensional features of objects, perception 350–357
Time of day and oscillators 459–464
see also entries under Temporal
TNF, *see* Tumour necrosis factor
Topography of brain, *see* Maps
Torpedo, DnaJ-like cysteine string proteins 223, 224, 225
tottering (*tg*) 191
Toxin-extruding antiporters 372 (BR)
Training and locomotor ability after spinal injury 74–76, 347 (L)
Transcription (of DNA)
circadian timing and 461–462, 487–492
DNA repair coupled to 506
Transcription factor
c-Jun 227–231
NF-κB 252–258
see also Immediate–early genes
Transforming growth factor-α, neuronal differentiation and 359
Transforming growth factor-β
bone morphogenetic proteins as subclass of 309
in neural development 364
in neuronal differentiation 359
Transgenic animals (mice; rats, etc.)
as Alzheimer's disease models 279–280
GDNF gene 277–278
monoamine effects on neural differentiation in 270
as Parkinson's disease models 277–278
reactive astrocytes and gliosis in 574
Xenopus as 428–429 (BR)
Transplantation (to brain and its use in neurodegenerative disease) 477–482, 530–538
fetal neural tissue 477–482
immortalized stem and progenitor cells 530–538
Trinucleotide-repeat expansion family of

neurodegenerative diseases 349 (L)
Tritocerebrum (of insects) 259
Trk
p75^{NTR} and 287–290
TrkA, apoptosis and 1–2, 287–290
TrkB/C, inner ear and effects of absence 162–163
TsA58 for immortalizing neural stem/progenitor cells 530, 531
Tumour necrosis factor (TNF)
neuroprotective role 257
TNF-α and multiple sclerosis 65
Tyrosinase 165
mutation leading to albinism 165, 169
Tyrosine hydroxylase, gene transfer (and therapeutic potential) 536
Tyrosine kinase receptors, *see* Trk

U

unc-5/*unc-6* 4
Utrophin 18

V

V1 and visual perception 106–111
V2 and visual perception 106–111
V4 (colour area) and visual perception 233–234 (BR)
V5A, depth movement-sensitive neurones of 350–357
Vagus nerve
bodily homeostasis and 508 (L), 509 (L)
immune signalling to CNS and 566
VAMP 405
Vasopressin gene, reversion of mutation 501–507
Ventral intraparietal area in depth perception and visual control of hand action 350–357
Ventral tegmental area, antipsychotic drugs and 33, 34, 35–36, 394 (L), 394 (L)
Ventromedial pallium in pretectal control 336
Ventromedial preoptic area (VMPO) and response to systemic inflammation 568, 569
Vertebrates
comparative neuroanatomy 51–52 (BR)
respiratory rhythm development 119–124
Vesicle(s)
synaptic, *see* Synaptic vesicles
techniques for measuring cycling of 281–287
Vesicular neurotransmitter transporters 372 (BR)
Vestibular neurones 159–164
loss 161–162
Video-assisted behavioural observation 187–189
Vimentin as astrocytic marker 570–573
Viral infections and NF-κB 254
Visceral neurons and bodily homeostasis 235–239, 508–509 (L)
Vision
high-level 317 (BR)
movement control involving hand/arm, *see* Hand/arm
Visual behaviour, amphibians 332–339
Visual cortex
blindsight and lesions in 22–23 (L)
hierarchical connections 355, 356
maps, development 375–376
perception grouping by 106–111
primary, bursts in 41–42
Visual imagery, 10 Hz alpha rhythm and 45, 46
Visual information leaving retina 332–333, 335
Visual motion detection 584, 584–585
Visual perception 106–111, 233–234 (BR), 371 (BR)
area V1 (17) and 106–111
area V2 and 106–111
area V4 and 233–234 (BR)
see also Depth perception
Visual system 233–234 (BR)
dyslexia and magnocellular component of 147–152, 397–398 (L)
evolution 416
see also specific components
Vocal control nucleus of songbirds 58–62, 343–346 (L)
Volta, Alessandro 443–444, 445
Voltage-gated ion channels
Ca^{2+} channels 16, 204–212
K^+ ion channels 16
Na^+ ion channels 16
von Humboldt, Alexander 239–242, 559 (L)
VUM neurones and appetitive learning, honeybees 246–251

W

Waterfall illusion 584–585
who-cares (*wae*) 7
Working memory 456–457

X

X chromosome, fragile 349 (L)
Xenopus
lens induction 417
oocytes, ion channels and 318–319 (BR)
transgenic, microinjection methods and developmental neurobiology 428–429 (BR)
Xenotransplantation, fetal neural 479–480, 481

Y

Y receptor subtypes 294–298
Young, John Zachary 433–435 (O)

Z

Zebra finch, vocal control nucleus 58–62, 343–346 (L)
Zebrafish, genetic analysis of axon guidance and mapping 3–8
Zebrin 191
Zinc ions and kainate-induced hippocampal cell death 500

TECHNICAL TIPS ONLINE

Bags of free tips for molecular biologists

A unique online journal of peer-reviewed molecular biology techniques articles

http://www.elsevier.com/locate/tto
in Europe http://www.elsevier.nl/locate/tto

KEY FEATURES

- free to use
- coverage of: PCR, gene expression, cloning & sequencing, and much more
- discussion/feedback for all articles
- rapid publication
- EMBASE/MEDLINE abstracts
- information about products cited in articles
- new product information
